Projects

ULearn Teacher and Parent

6 Months

U-Learn is a comprehensive platform designed to empower educators with the tools to effortlessly monitor and assess student performance. With its intuitive features, teachers can track progress, identify strengths and areas for improvement and personalize their instructional approach to meet each student's unique needs.

Key Features:

- Activity: Monitor student activities through posts that support both image and video uploads.
- Attendance: Daily attendance tracking with the option for parents to download monthly attendance reports in PDF format.
- Chat: Real-time communication module using Socket.IO, enabling individual chats and class-wise group chats between teachers, students and parents. The chat supports image sharing and uploads of images and videos directly to an S3 bucket.
- Vendor: Display real time vendor availability within a 10-kilometer radius of the user's current location in google map.

Pondus

5 Months

The Pondus App is the mobile interface of the Pondus Platform, designed to improve animal welfare and farm efficiency through real-time data monitoring. It helps farmers track key health metrics, optimize resources, and make informed decisions.

Key Features:

- Crop: Visualizes data on food/water consumption and animal mortality rates with multi-shed filtering and interactive graphs.

Metamed

4 Months

Metamed is a cross-platform mobile application developed to support patients with atrial fibrillation. Focused on the healthcare sector, the app provides educational video content and offers appointment

scheduling to enhance patient engagement and care.

Key Features:

- Health Insights: Enables real-time retrieval of user activity data from platforms such as Google Fit and Apple HealthKit, helping users and healthcare providers monitor health metrics effectively.

Player Stat

4 Months

Player Stat Data is a cross-platform application designed to track and manage football player performance metrics. The app aims to monitor, analyze, and evaluate individual players' progress over time, helping coaches and players identify strengths, weaknesses, and areas for improvement.

U Eat

2 Months

UEat is a cross-platform mobile application designed to offer a seamless food ordering and restaurant booking experience. Users can explore restaurants, place orders, reserve tables, and track their orders in real-time—from kitchen to doorstep. UEat simplifies dining with an all-in-one solution for food enthusiasts.

Key Features:

Food: Browse dishes by restaurant and category, and add items to the cart for easy ordering.

Cart: Place orders with coupon support and flexible payment options, including UEat Coins, Tigo Pesa, and cash on delivery.

Restaurant: View a list of nearby restaurants, check availability, and reserve seats in real-time—ensuring a hassle-free dining experience without long wait times.

Game on fundraiser

3 Months

Game on fundraiser is a cross-platform mobile application designed to provide users with an intuitive interface to discover, view, and participate in fundraising events.

DT Care Doctor and Patient

1 Months

Developed and maintained a complete healthcare solution consisting of two apps—Patient App and Doctor App—to streamline communication between patients and healthcare providers.

Patient App: Enables patients to easily locate clinics, book appointments with verified doctors, consult via secure in-app chat, and directly call doctors for guidance.

Doctor App: Assists doctors in managing appointments, providing professional suggestions, and securely chatting with patients for consultations and follow-ups.

Key Features:

Appointment booking and management system.

Streamlined healthcare communication and management in a single platform.

Additional Features Integration :

Zego Video Call Integration in both apps with:

Mic mute/unmute functionality.

Camera switch.

Background mode support to keep video calls ac
